

Welde wood driven by passion

Plywood
Hardboard
Sawn Timber

Timber – at highest Quality

Welde has been producing plywood panels made of poplar, birch, beech and other wood species for more than 80 years in Troyan/Bulgaria – and always with great passion. As a reliable partner, we take responsibility for our products, our business partners, and the environment.

Cost-optimized solutions for construction projects

Whether wooden or concrete construction - Welde shuttering boards, two-by-fours and posts always offer the perfect solution. Our film-coated plywood panels, with particularly low weight, are characterized by the highest quality at low costs.

Ecologically produced for the furnishing sector

Whether in sofa production or shop fitting - Welde plywood and hardboard are always the right choice. The portfolio of different wood-based panels is huge and is used in a wide variety of furniture constructions.

Versatile use in the automotive sector

Whether in a car, on the train, van or trailer – Welde plywood and hardboard can be used in many ways. The right balance between weight and load-bearing capacity is essential. Welde poplar plywood is not only light, but also stable, especially the combi plywood which is made from poplar and birch veneers.

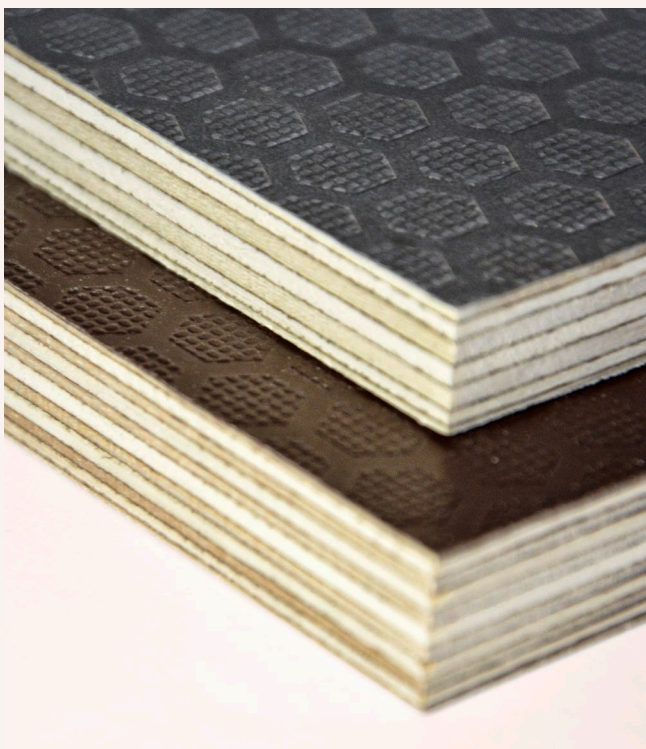

High quality protection for your products

High-quality products require the same level of protection – the Welde all-round products such as: packaging plywood, coated or uncoated hardboard, and various types of sawn timber don't give damage a chance.

Our goal is to constantly improve our performance. Our Product development - especially in the field of plywood - is working on the combination of different materials to develop sound isolating or individually requested surface properties.

As a medium sized Plywood factory our strength is Flexibility to react on special Customer demands. On special customer requirements we can react quickly. Partners for developing plywood solutions based on customer demand are always welcome. **At Welde we live for Innovation.**
